

Anybus X-gateway - PROFINET-IRT Device - Modbus RTU Slave

The Anybus X-gateway allows you to seamlessly inter-connect PLC control systems and their connected devices between and PROFINET-IRT and Modbus RTU networks.

FAST COPYING OF I/O DATA

The X-gateways primary function is with the fast transfer of cyclic I/O data between the two networks. This offloads your PLC from working with additional calculations. The gateway acts as a Device on the PROFINET-IRT network and as a Slave on the Modbus RTU network. The data transmission between the two networks is completely transparent with a maximum data capacity of 512 bytes in each direction.

The connection between the two networks is quickly set up in the Anybus Configuration Manager software, included with the X-gateway. No programming skills are needed to set up the X-gateway. As factory default the X-gateways have a pre-defined I/O size of 20 bytes I/O.

Features and benefits

- Fast copying of cyclic I/O data between PROFINET-IRT and Modbus RTU networks (10-15 ms)
- Proven and tested with all PLC manufacturers
- Supports up to a maximum of 512 bytes of Input and Output data in each direction
- Possibility to build web pages displaying and controlling a factory floor process with data from the other connected network
- Fast, dynamic transfer of fieldbus data to e.g. SCADA/HMI/Enterprise level systems based on Microsoft Windows, via the included Anybus OPC server
- Optional control status information added to I/O data for diagnostic purposes
- Robust stand-alone housing for use in harsh industrial environments
- Global free technical support and consultancy

PROFINET IRT Device/Slave interface

PROFINET IRT Device/Slave settings can be made either via the built-in web interface, or by importing the provided .GSDML file into engineering tool of the controlling PLC.

- Complete PROFINET RT and IRT functionality specification 2.3
- Conformance tested supporting Class A, B and C
- Max 512 bytes of Input and 512 bytes of Output data
- Baud rate 10/100 Mbit/s Isochronous cycle times 0.25 to 4 ms (25 Us increments)
- SNMP-MIBII support

CP/IP Configuration via DCP (Discovery and Configuration Protocol)

LDP (Linked Layer Discovery Protocol)

- Support for I&M (Identification & Maintenance)
- PROFINET uplink configuration via .GSDML file
- Dual port cut-through switch
- Dual RJ-45 ports available simultaneously
- PROFINET Asset Management

Modbus RTU Slave interface

Modbus RTU network address settings made via on-board configuration switches

- Complete Modbus RTU slave functionality
- Max 512 bytes of Input and 512 bytes of Output data
- Modbus diagnostics support
- Configuration via on-board DIP switches
- Modbus RTU baudrate 12-57,6 kbit/s
- 1x D-sub 9-pin female network connector

TECHNICAL SPECIFICATIONS

114 x 44 x 127mm or 4,49 x 1,73 x 5,00"
400g or 0,880 lbs
-25 to +65 °C or -13 to +149 °F
-40 to +85 °C or -40 to +185 °F
24 VDC +/- 20% via 2-pole 5.08 mm Phoenix pluggable screw connector
max. 400mA (Typical 200mA)
Aluminium and plastic
Vertical / Flat*
YES, on both BUS/Ethernet side
IP20, NEMA rating 1
DIN-rail (EN 50022 standard)
via USB port with Anybus Configuration Manager software
CE, _C UL _{US} , RoHS
